

Hydraulic Control Panel

The WILITEC Engineers can design any customized hydraulic control panel which suits exactly to your needs, either to pressure test your equipments or to control your hydraulic BOP, stuffing box, line wiper, safety valves and any other types of valves.

Willitec has already a flexible range of portable, lightweight and economical, hydraulic control panels and pressure testing units adapted for your Slickline operations.

Many options can be proposed to design your Hydraulic Control Panel:

- Single or Multi pumps Air Driven HASKEL pumps to increase the range of the system (pressure & flow)
- Choice of controls from single valve to multiples various valves
- Choice of reservoir capacity
- Choice of accumulator
- Electronic recorder or Charts
- Choice of hose reels
- Stainless Steel Frame or Standard Steel painted

Fully DNV 2.7-1 / EN 12079 certified, the steel frame is suitable for offshore and onshore operations.

Customizing your hydraulic control panel unit to improve the functionality.
